

I believe it is absurd for some government agency like NAB to control what I am listening to on the radio. Let XM deal with their satellites, repeaters, and whatever else. XM is growing rapidly not because they are forcing FM or AM off the market, but simply because they are using a superior technology. Telling XM what to do with regards to their services is as ridiculous as attempting to ban Cable or DSL Internet access because it draws customers away from dialup.

I hereby urge FCC to reject the NAB petition 04-160.

Sincerely,  
Greg Reshko.
